

VoIP Telephone Timekeeping

MITC is pleased to announce that Contractor Workforce Management now includes VoIP (Voiceover IP) Telephone Timekeeping as well as Analog Telephone Timekeeping and Web Clock! VoIP enables you to use a less expensive broadband Internet connection instead of using analog telephone lines. VoIP is available with MITC Cloud or customer-hosted solutions.

BENEFITS OF USING VOIP FOR TELEPHONE TIMEKEEPING

- ▶ Eliminate costs of multiple analog phone lines
- ▶ No need to use digital to analog converters
- ▶ No busy signals
- ▶ No need to buy lines for "busy" periods
- ▶ Automatically restarts in the event of power outage
- ▶ No lines down/bringing lines up
- ▶ Greater stability
- ▶ No need for dedicated server or Dialogic Voice Processor
- ▶ Reduced costs if using MITC Cloud
- ▶ Per employee pricing: only pay for what you use

MITC will continue to support analog/dialogic telephone timekeeping, however you'll always have the choice to switch to VoIP in the future.

Contact russellh@mitcsoftware.com for more information
or to order your VoIP Telephone Timekeeping system.
